## 1 INTRODUCTION

AIDA64 Engineer is an industry-leading system information, diagnostic and benchmarking solution for corporate IT technicians and engineers. It offers exhaustive computer analysis, benchmarks optimized for the latest technologies, advanced hardware monitoring and diagnostics, and support for command-line options.

All you need to start using the software is the ZIP package downloadable from our website. Installation instructions are provided in the present Setup Guide, while a detailed description of the functions AIDA64 Engineer offers is available in the AIDA64 Engineer [User Manual](#), also downloadable from our website.

### 1.1 MINIMUM SYSTEM REQUIREMENTS

Operating systems:

- Windows 95 / 98 / Me
- Windows NT4 / 2000
- Windows XP
- Windows PE
- Windows Server 2003
- Windows Vista
- Windows Server 2008
- Windows 7
- Windows Server 2008 R2
- Windows 8
- Windows 8.1
- Windows Server 2012
- Windows Server 2012 R2

Processor: Intel Pentium or newer

Memory: 32 MB or more (or 128 MB or more for running the benchmarks)

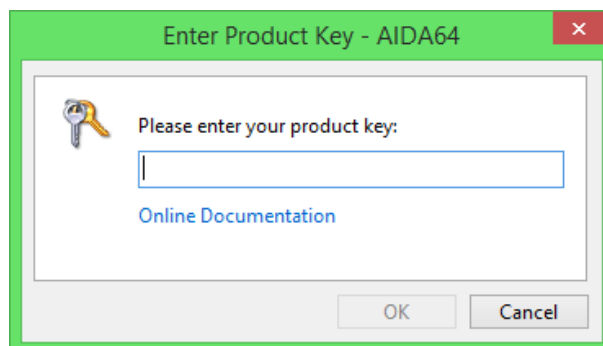

Available hard drive space: 40 MB

AIDA64 is completely vendor-independent and is compatible with all PCs running 32-bit and 64-bit Microsoft Windows operating systems.

### 1.2 ENTERING THE REGISTRATION KEY

When launched for the first time, AIDA64 Engineer offers a 30-day trial period with limited functionality (which means that it displays the words "TRIAL VERSION" in place of some of the data/values). At this stage you can also purchase a new registration key or enter an existing one. To do this, click on Enter Product Key and enter the 25-character plus 4-hyphen registration key that was provided in the product registration email after purchase. The product key can also be entered at any time during the trial period by selecting **Help | Enter Product Key...** in the main menu. The software can be activated without an internet connection.

During the validity of the license, the software can be used with full functionality; the user is entitled to free updates and support. Moreover, AIDA64 automatically searches for and activates the latest updates.

## 2 INSTALLING AIDA64

AIDA64 does not require installation, and is available as a ZIP package only (without an installer).

### 2.1 DOWNLOADING AIDA64

We can download the AIDA64 Engineer ZIP package from the [Download](#) section of our official website.

### 2.2 UNZIPPING AIDA64 INTO A FOLDER

As AIDA64 does not require installation, we can run it by unzipping the files into an empty folder and launching aida64.exe.

After downloading the ZIP package, we have to right-click it and select “Extract all” in the context menu.

In the “Extract compressed folders” window, we need to select a destination folder for the AIDA64 files, and then click “Extract”.

Files will be extracted to this folder:

Check the “Show extracted files when complete” checkbox.

This option will automatically open the selected folder with the unzipped AIDA64 files as soon as they are extracted.

Now we need to create a desktop shortcut. To do this, right-click “aida64.exe” and select “Send to desktop (create shortcut)” from the context menu.

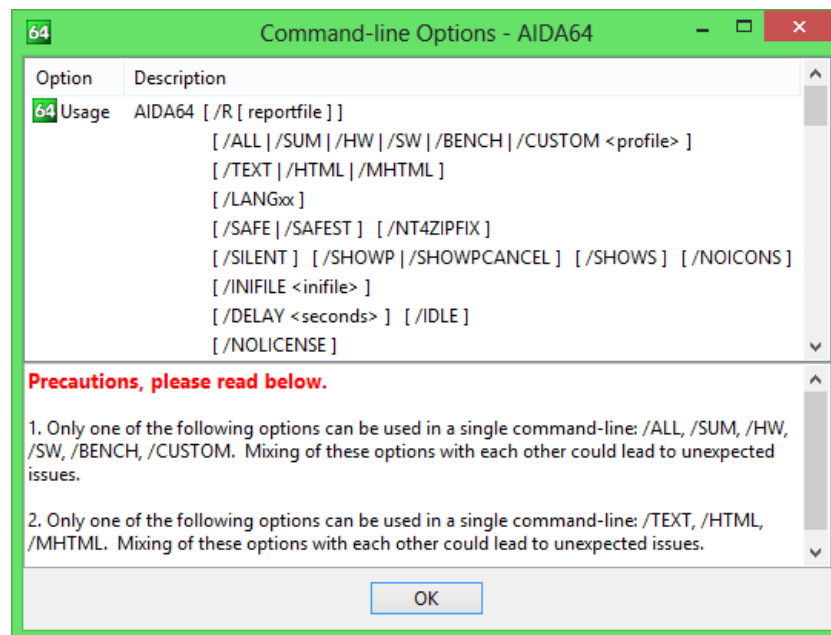

### 2.3 EXTRACTING TO A PORTABLE STORAGE DEVICE

AIDA64 Engineer can be run from portable storage devices, such as USB flash drives or external HDDs, which makes it possible for us to create reports of the PCs, examine their performance or their “health status” on the spot. In order to launch the software from an external storage device, all we need to do is extract (or copy) the AIDA64 files into an empty folder on the device, and then run aida64.exe.

If we choose to copy the program to the local computer, we need to make sure to delete the files after we have finished maintenance, because AIDA64 Engineer can only be used by a single corporate engineer or IT technician.

### 3 COMMAND-LINE OPTIONS

AIDA64 Engineer offers several command-line options with which we can customize network audit, automated report creation, remote connections and some security features.

#### Precautions:

1. Only one of the following options can be used in a single command-line: /ALL, /SUM, /HW, /SW, /BENCH, /AUDIT, /CUSTOM. Using more of these options simultaneously could cause unexpected issues.
2. Only one of the following options can be used in a single command-line: /TEXT, /HTML, /MHTML. Using more of these options simultaneously could cause unexpected issues.

#### 3.1 REPORT

- **/R [reportfile]** – this option can be used to create a report and save it to file

When no file name is specified, the report will be written to the file specified in Preferences / Report / Report File. It is recommended to specify a full path name for the report file in the command-line. For a network audit, we should use UNC paths in folder names instead of using a mapped network drive. Reports are automatically compressed if this option is enabled in Preferences / Report. In the report file names we can use control strings.

Example: AIDA64 /R \\server\share\folder\%HOSTNAME /HTML /AUDIT /SILENT /SAFE

### 3.2 REPORT PROFILE

- **/ALL** – the reports created will include all pages from the page menu.
- **/SUM** – the reports created will include only the *Computer / Summary* page
- **/HW** – the reports created will include only the pages listing hardware-related information
- **/SW** – the reports created will include only the pages listing software-related information
- **/BENCH** – the reports created will include the benchmark pages only.
- **/CUSTOM** [`\\Server\AIDA64\profile.rpf`] – this option loads a customized report profile

### 3.3 REPORT FORMAT

- **/TEXT** – reports will be created in plain text format
- **/HTML** – reports will be created in HTML (HyperText Markup Language) format  
HTML report layout can be customized in Preferences / Report / Report Look. Although HTML reports are ideal if we want to print reports.
- **/MHTML** – reports will be created in MHTML format (with HTML images)  
MHTML reports are basically HTML reports with small icons included. MHTML report layout can be customized in Preferences / Report / Report Look. Although MHTML reports are ideal if we want to print reports.

### 3.4 LANGUAGE

**/LANGxx** – where “xx” should be replaced with a 2-letter language code. The following languages are currently supported:

- |                             |                   |                              |
|-----------------------------|-------------------|------------------------------|
| • AA = Arabic               | • FI = Finnish    | • NO = Norwegian             |
| • AL = Albanian             | • FR = French     | • PL = Polish                |
| • BG = Bulgarian            | • HR = Croatian   | • PT = Portuguese            |
| • BS = Bosnian              | • HU = Hungarian  | • RO = Romanian              |
| • BY = Belarusian           | • ID = Indonesian | • RU = Russian               |
| • CA = Catalan              | • IT = Italian    | • SE = Swedish               |
| • CN = Chinese (Simplified) | • JP = Japanese   | • SI = Slovenian             |
| • CZ = Czech                | • KR = Korean     | • SK = Slovak                |
| • DE = German               | • LT = Lithuanian | • SR = Serbian               |
| • DK = Danish               | • LV = Latvian    | • TR = Turkish               |
| • EN = English              | • MK = Macedonian | • TW = Chinese (Traditional) |
| • ES = Spanish              | • NL = Dutch      | • UA = Ukrainian             |

### 3.5 TROUBLESHOOTING

- **/SAFE** – This option activates safe mode, in which low-level PCI, SMBus and sensor scanning are disabled. For network audits, it is recommended to use this option to make sure AIDA64 does not cause system stability issues.
- **/SAFEST** – This option activates the safest mode in which kernel drivers are not loaded either.
- **/NT4ZIPFIX** – Using this option, an Iomega Zip drive related issue can be avoided on Windows NT 4.0 systems.

### 3.6 MISCELLANEOUS

- **/SILENT** – This option can be used to hide the AIDA64 icon on the System Tray (also known as Notification Area) and the bubble notifications.
- **/SHOWED** – Using this option displays a dialog box before the report is sent in e-mail. This can be useful in help desk scenarios as the dialog box lets the user enter special comments about his/her issue. This option must be used with the /E command-line option.
- **/SHOWP** – Using this option, the report creation progress can be tracked on screen, but no user intervention is allowed (can be used with the options /R, /E or /FTPUPLOAD).
- **/SHOWPCANCEL** – Using this option, the report creation progress can be tracked, and user intervention is allowed (can be used with the options /R, /E or /FTPUPLOAD).
- **/SHOWS** – Using this option, the startup process of AIDA64 can be tracked on screen.
- **/NOICONS** – AIDA64 will not display icons on its user interface. This option can be used to save network bandwidth.
- **/INIFILE <\\Server\AIDA64\aida64.ini>** – This option can be used to tell AIDA64 where to load the settings from.
- **/DELAY [seconds]** – This option can be used to delay the startup of AIDA64 so that other programs can load faster.
- **/IDLE** – This option sets AIDA64 application process to idle (lowest) priority.
- **/NOLICENSE** – This option can be used to disable and hide all software license related information, including the *Software / Licenses* page.

### 3.7 VARIABLES

With variables, we can use dynamic path and file names in command-line switches.

- **\$HOSTNAME** – Inserts host name
- **\$USERNAME** – Inserts current user name
- **\$DOMAIN** – Inserts current logon domain
- **\$IPADDR** – Inserts primary network adapter IP address (aaa-bbb-ccc-ddd)
- **\$MACADDQ** – Inserts primary network adapter MAC address (AABBCCDDEEFF)
- **\$MACADDR** – Inserts primary network adapter MAC address separated by hyphens (AA-BB-CC-DD-EE-FF)
- **\$UUIDMAC** – Inserts DMI System UUID. When this is not available, it inserts MAC address (00000000-00000000-0000AABB-CCDDEEFF)
- **\$MONTH** – Inserts current month (MM)
- **\$DATE** – Inserts current date (YYYY-MM-DD)
- **\$TIME** – Inserts current time (HH-MM-SS)

The default environment variables of Windows can also be used: these are listed in AIDA64 on the *Config / Environment* page. If we want to use these we need to enclose them in percent signs, for example: %LOGONSERVR%.

## 4 CONTACT

### **ABSEIRA Kft.**

Erzsébet tér 2.

1051 Budapest

Hungary

Registration number: 01-09-947083

VAT identification number: 22971074-2-41
